ENHANCING YOUR PREMISES  
WITH FABRIC ARCHITECTURE

## TOTAL WEATHER PROTECTION

Thanks to the unique materials and fabrication processes used in the construction of facades, exceptional protection against wind, humidity and rain is offered, keeping the building under the façade free of weather related damages. The fabric used also provides and ensures long-term resistance to UV radiation, meaning both the building and its interior are kept protected from sun damage. This also helps to preserve a constant temperature inside the building and allows the reduction of energy used for heating and cooling.

# FABRIC FACADES

## EXCEPTIONAL TRANSPARENCY

The construction of the fabrics used in a mesh facade means that the transparency, or level of visibility, from the interior of the building to the exterior is unrivalled by any other products available. This transparency allows clients to wrap entire buildings, independently from the position of the windows, opening up opportunities for eye-catching architectural designs.

## COST EFFECTIVE SOLUTION

One of the best features of facades by Shade Systems is their ability to instantly transform what may have been a bland building into an eye catching architectural statement that truly reflects your company. While a complete facelift and renovation of a building's exterior can cost millions of dollars, a façade allows the same level of transformation to occur at a fraction of the cost and in a much less permanent way. This means that future transformations of the building can easily be carried out should they be required.

## FREEDOM OF DESIGN

With 27 different colours available, and the option of full digital printing, the only limits surrounding the use of a façade on your building are those your imagination constructs! A façade is a highly cost effective and easy way of transforming your building into a stunning work of architecture. This is also partly due to the arrangement of the façade structure, which is virtually independent of the building itself, providing a sense of 3-dimensionality through the flexibility of the material.

## WARRANTY FOR LONG LIFE

Thanks to the outstanding technical performance of the materials used in the construction of facades, architects and investors can be certain of maximum safety and reliability for their projects, while experiencing high longevity through a 10 year product guarantee. Shade Systems also offers a lifetime guarantee on the workmanship of any façade constructed, providing ultimate peace of mind for investors.

LET US MAKE YOUR DREAMS COME TRUE!

## WHAT WE OFFER WHEN IT COMES TO FACADES

- Design ideas and suggestions.
- Concept drawings prior to any groundwork beginning. We will work with you on these until you are no less than 100% satisfied. We will also do our utmost to ensure your finished project will look fantastic, be aesthetically pleasing and be the most effective it can be in regards to weather protection.
- Fabrication of both steel and fabric.
- Obtain the necessary permits, resource consents and work through any legal requirements from your local council.
- Dedicated project management.
- Complete installation from our highly experienced team – this will minimise disruptions to your schedule.
- Recommendations for lighting options.
- Site tidy after installation is complete – ready for your immediate use.
- Because we care the most, for you and the next generation, we are committed to providing products which will make your company building look the best for years. That's why we're pleased to offer the option of care and maintenance of your facade whenever you require after it has been installed.
