

# COVERED WALKWAYS

WALKWAY CANOPIES

## VISUAL & UNCLUTTERED

These custom designed modular walkway systems are the perfect structures to complement or enhance existing architecture while protecting your patrons and customers from the weather – both wet and otherwise! These structures are also a perfect way to help control pedestrian flows with minimal visual interruptions so your parking space retains an open, uncluttered feel. With a huge range of options and additional extras available, we are able to create structures that will fulfil your design requirements completely. Each structure is also backed with our unique 15 year warranty, ensuring your customers will be kept sheltered for a long time to come!

## WARRANTY

Each covered walkway structure is covered with our 15 year warranty and a lifetime guarantee on workmanship.

## ENGINEERED

We provide structural engineering for any covered walkway structures. This is required for council permits and gives you the added assurance that your structures will be safe for years to come.

## FABRIC

The shade cover is manufactured from heavy duty materials – either shade mesh or PVC fabric, which provide UVR protection of up to 99% without losing natural light under the canopy. The design is modular, but each shade structure is individually created, custom made and fitted to suit each site.

## FRAMEWORK

Our ultra-strong steel poles are galvanised inside and out for ultimate protection against rust and weather damage. An extra option of a paint finish is also available to ensuring your structure will fit in with any existing colour schemes with the added protective benefits that the extra finish offers.

## HARDWARE

All hardware is marine grade stainless steel to ensure rusting is not an issue and all structural bolts are galvanised. The tensioning system is fully adjustable to enable tensioning to be carried out later in the shade's life, should it become necessary.

## EXTRAS

A range of lighting options, fabrics, colours and design styles are available to ensure the finished product is exactly what you need. Other options, including toughened glass or profile metal roofing and items such as taxi bays, seating areas and pedestrian links are also able to be integrated into your design.

## GALVANISED – STANDARD

1. Black steel. All steel fabrication is completed before any protective coatings are applied.
2. Steel is then chemically cleaned to ensure all impurities are removed.
3. Steel framework is then immersed in a 450°C bath of molten zinc. The zinc is metallurgically fused into the steel itself, becoming part of the steel's surface by forming tough zinc-iron alloy layers that are actually harder than the base metal, as well as outer protective layers of pure solidified zinc. This immersion process ensures a uniform coating that covers the entire surface area including all internal surfaces.

## PAINT FINISH – OPTIONAL

4. Galvanised steelwork is sweep blasted to provide an extra smooth clean surface.
5. Specialty etch primer is applied to all exterior surfaces.
6. 2-pack polyurethane paint finish applied to all exterior surfaces. This is an ultra hard enamel paint that will withstand exposure to the outdoor elements.
